

SPRINT DELIVERY – 1

Date	5 November 2022
Team ID	PNT2022TMID22430
Project Name	Smart Waste Management System for Metropolitan Cities

Functional Requirement – simulation creation(connect sensor arduino with python code).

User story : USN – 1

STEP 1: Type the given Python Code in Compiler.

PYTHON CODE :

```
import time
import sys
import ibmiotf.application
import ibmiotf.device
import random

#Provide your IBM Watson Device Credentials
organization = "32ws5h"
deviceType = "Ultrasonic_sensor"
deviceId = "554517"
authMethod = "token"
authToken = "12345678"

# Initialize GPIO
def myCommandCallback(cmd):
    print("Message received from IBM IOT Platform : %s" % cmd.data['ALERT'])
    status=cmd.data['ALERT']
    if status=="BIN FULL":
        print ("ALERT!! BIN IS FULL")
    else status=="NORMAL LEVEL":
        print ("BIN IS IN NORMAL LEVEL")
```

```

try:
deviceOptions = {"org": organization, "type": deviceType, "id": deviceId, "auth-method":
authMethod, "auth-token": authToken}
deviceCli = ibmiotf.device.Client(deviceOptions)
#.....

except Exception as e:
print(" Caught exception connecting device: %s" % str(e))
sys.exit()

deviceCli.connect()

#SENSOR DATA

binlevel=0
binweight=0
while True:

    #Get Sensor Data from Ultrasonic sensor

    binlevel=binlevel+random.randint(90,110)
    binweight=binweight+random.randint(60,100)
    data = { 'binlevel(%)' : binlevel, 'binweight': binweight }

    def myOnPublishCallback():
        print ("Published binlevel = %s %" % Garbage_level, "binweight = %s %" % binweight,
"to IBM Watson")

    success = deviceCli.publishEvent("Ultrasonic_sensor", "json", data, qos=0,
on_publish=myOnPublishCallback)
    if not success:
        print("Not connected to IoTF")
    time.sleep(10)

```

```
# Disconnect the device and application from the cloud
deviceCli.disconnect()
```

```

import time
import sys
import ibmiotf.application
import ibmiotf.device
import random

#Provide your IBM Watson Device Credentials
organization = "32we5h"
deviceType = "Ultrasonic_sensor"
deviceId = "554517"
authMethod = "Token"
authToken = "12345678"

# Initialize GPIO
def myCmdCallback(cmd):
    print("Message received from IBM IoT Platform : %s" % cmd.data['ALERT'])
    status=cmd.data['ALERT']
    if status=="BIN FULL":
        print ("ALERT!! BIN IS FULL")
    else status=="NORMAL LEVEL":
        print ("BIN IS IN NORMAL LEVEL")

try:
    deviceOptions = {"org": organization, "type": deviceType, "id": deviceId, "auth-method": authMethod, "auth-token": authToken}
    deviceCli = ibmiotf.device.Client(deviceOptions)
    #.....

except Exception as e:
    print(" Caught exception connecting device: %s" % str(e))
    sys.exit()

deviceCli.connect()

#SENSOR DATA

binlevel=0
binweight=0
while True:

    #Get Sensor Data from Ultrasonic sensor

    binlevel=binlevel+random.randint(90,110)
    binweight=binweight+random.randint(60,100)
    data = { 'binlevel': binlevel, 'binweight': binweight }

    def myOnPublishCallback():
        print ("Published binlevel = %s" % binlevel, "binweight = %s" % binweight, "to IBM Watson")

```

```

File Edit Format Run Options Window Help

authToken = "12345678"

# Initialize GPIO
def myOnCallback(cmd):
    print("Message received from IBM IOT Platform : %s" % cmd.data['ALERT'])
    status=cmd.data['ALERT']
    if status=="BIN FULL":
        print ("ALERT!! BIN IS FULL")
    else status=="NORMAL LEVEL":
        print ("BIN IS IN NORMAL LEVEL")

try:
    deviceOptions = {"org": organization, "type": deviceType, "id": deviceId, "auth-method": authMethod, "auth-token": authToken}
    deviceCli = ibmiotf.device.Client(deviceOptions)
    #.....

except Exception as e:
    print(" Caught exception connecting device: %s" % str(e))
    sys.exit()

deviceCli.connect()

#SENSOR DATA

binlevel=0
binweight=0
while True:

    #Get Sensor Data from Ultrasonic sensor

    binlevel=binlevel+random.randint(90,110)
    binweight=binweight+random.randint(60,100)
    data = { 'binlevel(%s)' : binlevel, 'binweight': binweight }

    def myOnPublishCallback():
        print ("Published binlevel = %s %s" % Garbage_level, "binweight")
    success = deviceCli.publishEvent("Ultrasonic_sensor", "json", data, qos=0, on_publish=myOnPublishCallback)
    if not success:
        print("Not connected to IoT")
        time.sleep(10)

    deviceCli.commandCallback = myCommandCallback

# Disconnect the device and application from the cloud
deviceCli.disconnect()
```

STEP 3- Type the given Wokwi Code in Compiler.

WOKWI CODE-

```
#include <WiFi.h>
#include<PubSubClient.h>

#define ORG "32ws5h"
#define DEVICE_TYPE "Ultrasonic_sensor"
#define DEVICE_ID "554517"
#define TOKEN "12345678"

#define speed 0.034
#define led 14
String data3;
float h,t;

char server[] = ORG ".messaging.internetofthings.ibmcloud.com";
char publishTopic[] = "iot-2/evt/554517/fmt/json";
char topic[] = "iot-2/cmd/home/fmt/String";
char authMethod[] = "use-token-auth";

char token[] = TOKEN;

char clientId[] = "d:" ORG ":" DEVICE_TYPE ":" DEVICE_ID;

WiFiClient wifiClient;
PubSubClient client(server, 1883, wifClient);

const int trigpin=5;

const int echopin=18;

String command;
String      data="";

long duration;

foat  dist;

void setup()
{
```

```
Serial.begin(115200);

pinMode(led, OUTPUT);

pinMode(trigpin, OUTPUT);

pinMode(echopin, INPUT);

wifConnect();

mqttConnect();

}

void loop() {

bool isNearby = dist < 100;

    digitalWrite(led, isNearby);

publishData();

    delay(500);

    if (!client.loop()) {
mqttConnect();
    }
}

void wifConnect() {

Serial.print("Connecting to "); Serial.print("Wifi");
WiFi.begin("Wokwi-GUEST", "", 6);

while (WiFi.status() != WL_CONNECTED)
{ delay(500);

Serial.print(".");

}
```

```
Serial.print("WiFi connected, IP address: ");  
Serial.println(WiFi.localIP()); }
```

```
void mqttConnect() {  
    if (!client.connected()) {  
    }  
}
```

```
void initManagedDevice() {
```

```
    if (client.subscribe(topic)) {  
    // Serial.println(client.subscribe(topic));  
    Serial.println("IBM subscribe to cmd OK");
```

```
    } else {
```

```
        Serial.println("subscribe to cmd FAILED");  
    }  
}
```

```
void publishData()  
{
```

```
digitalWrite(trigpin,LOW);
```

```
digitalWrite(trigpin,HIGH);
```

```
delayMicroseconds(10);
```

```
digitalWrite(trigpin,LOW);
```

```
duration=pulseIn(echopin,HIGH);
```

```
dist=duration*speed/2;
```

```
    if(binlevel>95){
```

```
        String payload = "{\"Alert\":\"";        payload += binlevel; payload += "\"";
```

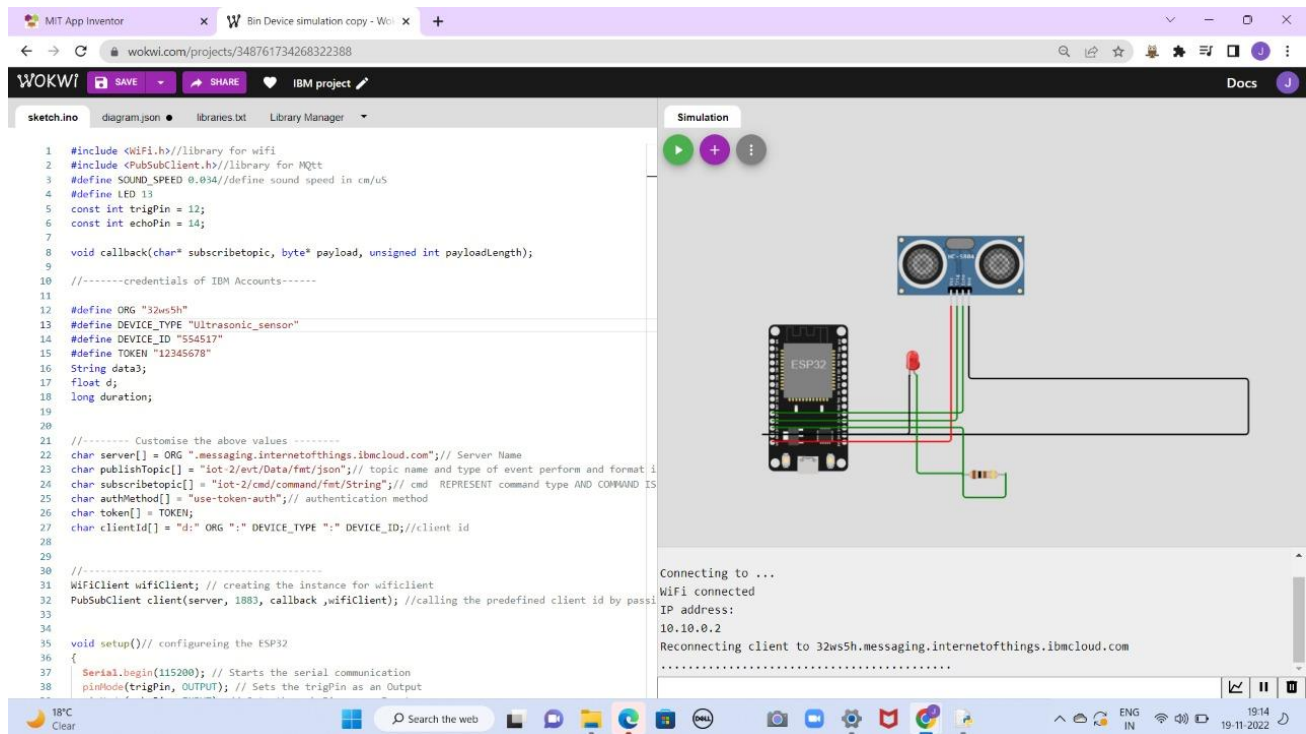

```
    }
```

```
}
```

```
}
```

STEP 4- Now Compile the code in Wokwi Compiler and Simulate it for further.

OUTPUT :

STEP 5- The below link is regarding Code & Output.
